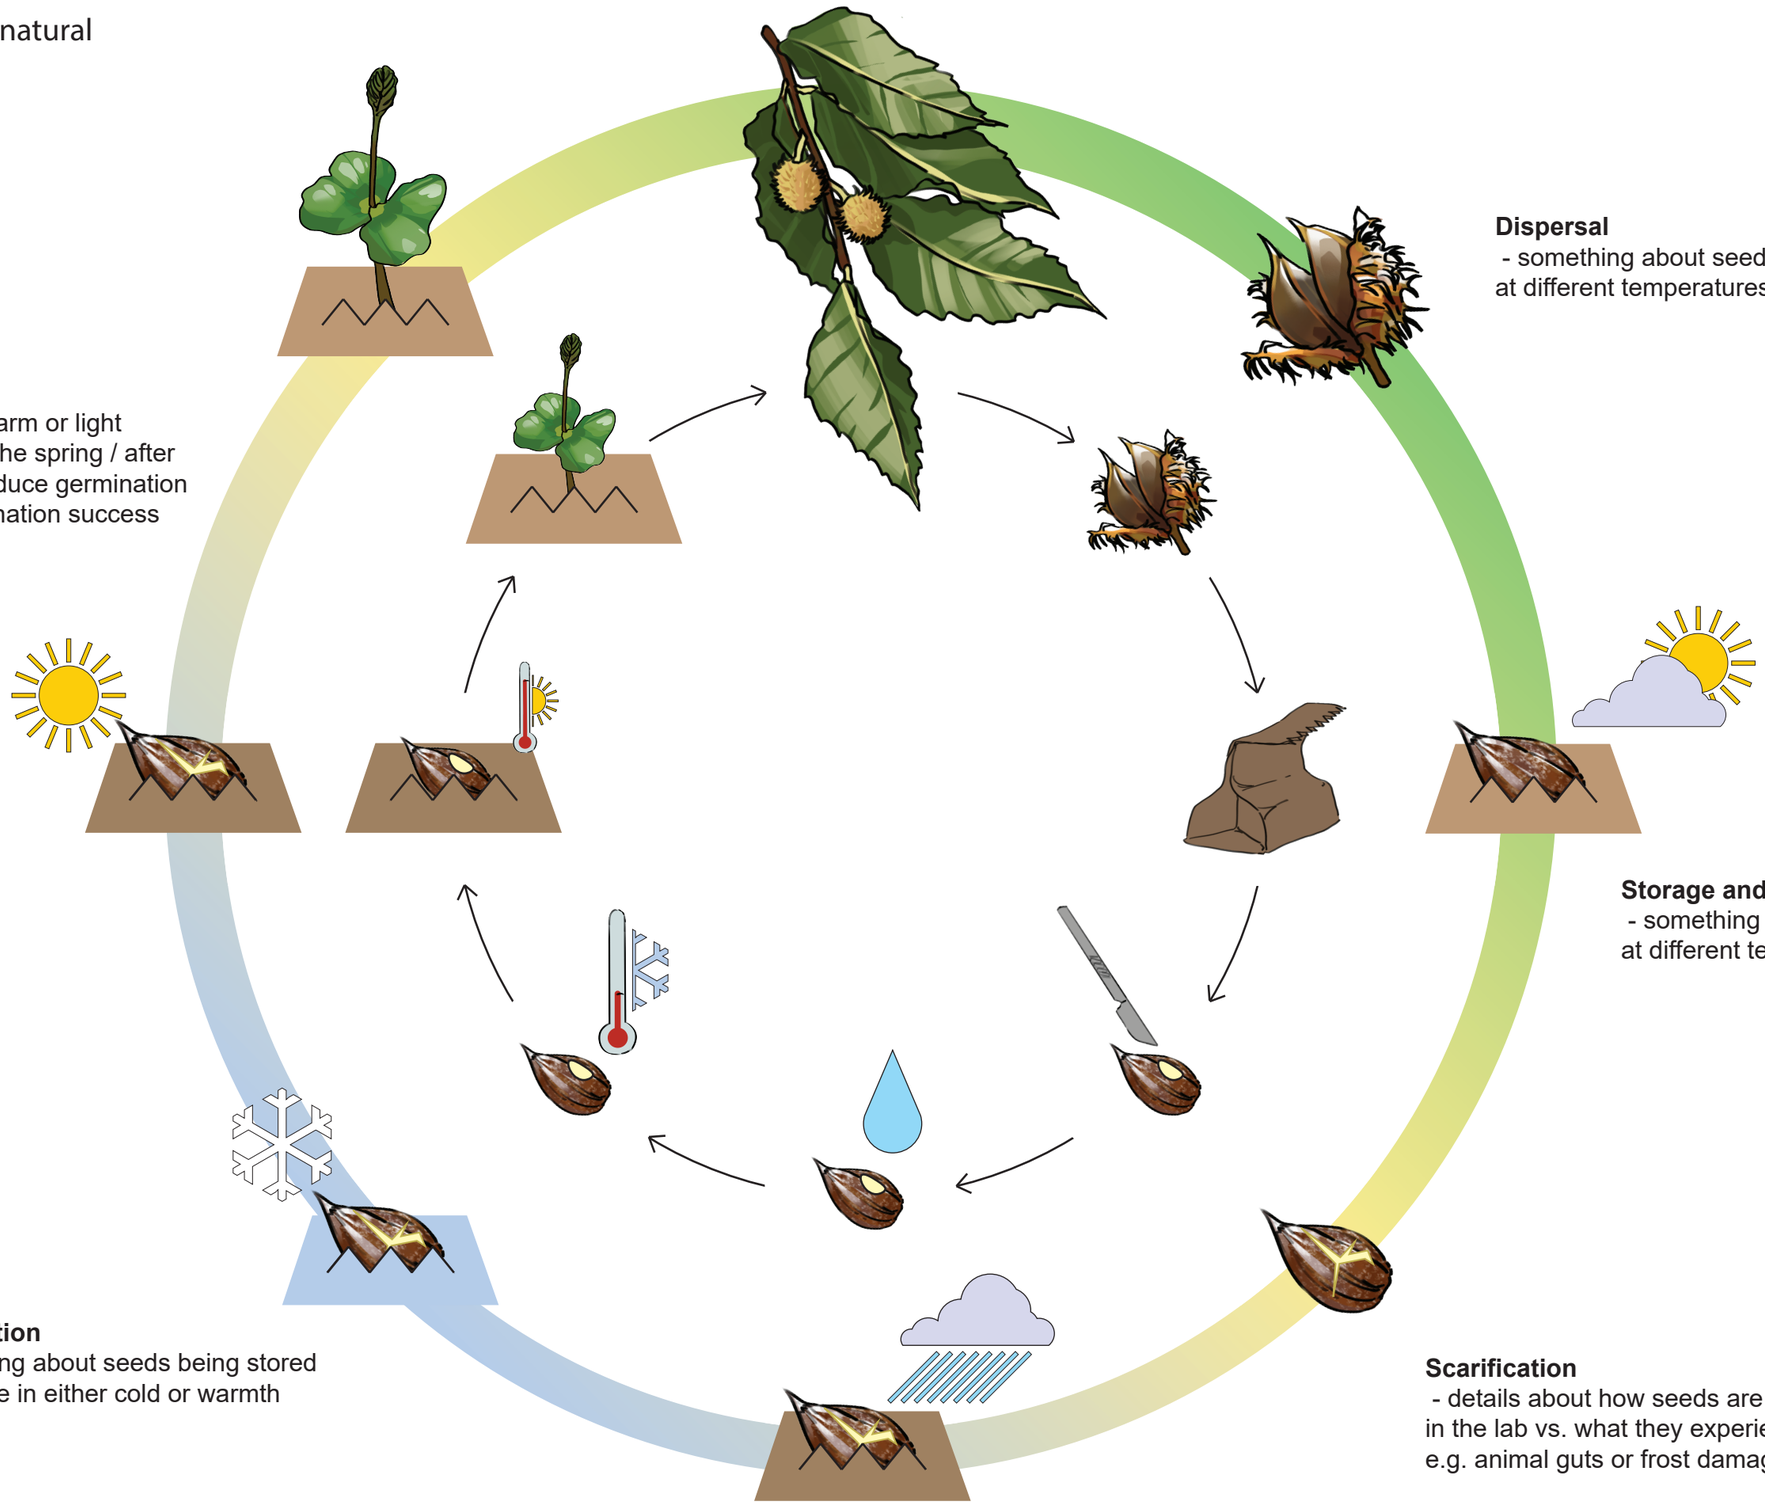
ex situ / experimental

in situ / natural



Germination
- details about warm or light exposure during the spring / after stratification to induce germination and to test germination success

Dispersal
- something about seeds being stored in dark at different temperatures

Storage and after-ripening
- something about seeds being stored in dark at different temperatures

Scarification
- details about how seeds are scarified in the lab vs. what they experience in e.g. animal guts or frost damage etc.

Imbibition
- details about soaking or other moisture treatments to hydrate the endosperm etc. in preparation for treatments or germination

Stratification
- something about seeds being stored in moisture in either cold or warmth
